SOURCE AND DATE CODES

—○—

1. What is the RTMA Production Source Code?

It is a standard numeric symbol of three digits, assigned and registered by RTMA headquarters, which manufacturers may stamp or mark on any or all of their products to identify the production source.

The RTMA standard code, in addition, provides for adding of numerals to the production source symbol to identify the year and week of production.

2. How does the date code work?

In addition to marking the production source of his company's products, a manufacturer may wish to identify the date. He can do

this by adding the last digit of the production year plus the number of the week of that year to his production source code.

A hypothetical example of the application of date code to the source code follows: Say a company is assigned the production source symbol 112. To add the date code the manufacturer would add a numeral for the year—such as "1" for the current year or "2" for 1952—and another number for the week of the year. Thus the combined source and date codes might be, in this case,

112112

which would represent the company's production code number "112", plus "1" for 1951, the production year, and "12" for the week of March 18-24, the production week. For convenience in identifying the week, tables on pages 17 and 18 give the numbers of each week in both 1951 and 1952.
